

Delete all zones on Huawei fiber optic switch

AI Overview

To delete all zones on a Huawei fiber optic switch, you can either remove the zoning configuration via CLI or perform a full configuration reset to clear all settings. Using CLI to Remove Zones

Access the switch via SSH or console port and log in with administrative credentials .Enter the zoning configuration view:`CodeCopy`system-view

List existing zones to confirm which zones are active:`CodeCopy`display zone

Delete individual zones using the command:`CodeCopy`undo zone Repeat for each zone if you want to remove them selectively .Save the configuration to make changes permanent:`CodeCopy`save

Removing All Zones via Configuration Reset

If you want to wipe all zoning and switch configurations:Backup current configuration to a TFTP server to prevent data loss .Reset saved configuration from the CLI:`CodeCopy`reset saved-configuration

Confirm the action twice. This clears the startup configuration but preserves runtime temporarily.Reboot the switch to load a clean configuration:`CodeCopy`reboot

For a full factory reset (if CLI access is blocked or firmware is corrupted), use the hardware reset button:Power down the switch.Press and hold the recessed reset button for more than 6 seconds while powering up.Wait for LEDs to blink amber, indicating a full reset .Post-Reset Steps

Reconfigure IP addresses, VLANs, and access credentials manually.Reapply any necessary ACLs, QoS policies, or port assignments.Verify the switch is operational using:`CodeCopy`display interfacedisplay vlandisplay zone

This approach ensures that all zones and legacy configurations are completely removed, providing a clean slate for new zoning and network setup .
