

Distinguishing between optical jumper cables and fiber optic pigtails

Overview

Learn the key difference between pigtail and jumper cables: only one end of a pigtail connects, while both ends of a jumper feature connectors. Perfect for your cabling needs! Fiber optic jumpers are used as jumpers for equipment to fiber optic cabling links. Only one end of the pigtail has a connector, and the other end is a broken end of the. A fiber optic cable is the physical transmission medium containing one or multiple optical fibers protected by layers of strength members and jacketing. It is typically used for: Common types include: In practice, “fiber cable” is often used as a simplified term, but “fiber optic cable” is the more. When you build or upgrade a fiber network, the same four words pop up everywhere— fiber optic (bare fiber), pigtail, patch cord, optical cable. They're related, but they are not interchangeable.
