

Fiber optic box patch cord details to note

Overview

This guide explains what fiber patch cables are, their types, connector standards, where they are used, and how to choose the right one for your data center. It connects one device to another, often within the same rack or across neighboring network equipment. These cables carry data in pulses of light. There are mainly two types of fiber optic patch cables: single-mode. If I had to explain it in one sentence, I'd say: a fiber optic patch cord is simply a fiber cable with connectors on both ends, used to connect two devices and transmit optical signals between them. These fiber optic cables have been built to exceed industry standards tested for insertion loss and reflectance on within UL certified OFNR (Riser) rated jacket with Kevlar yarn, and are factory terminated. Fiber optic patch cables support these demands by providing reliable high- speed connections.
