

Four-optical-four-electrical fiber optic switch

Overview

This series Fiber Optic switch redirects incoming optical signals into four selected output fibers. It is a true nonblocking device that accommodates all possible light paths. This is achieved using a patented MEMS configuration and activated via an electrical control signal. [Up to 120km]: Fiber transceiver provides multiple Gigabit SFP optical ports and 10/100/1000M adaptive RJ45 network ports, users can choose different SFP optical modules according to the needs of the site, hot swap FX ports to extend the fiber distance up to 120km. [Plug and Play]: Plug and play. An optical switch routes light signals directly between fiber ports without optical-electrical-optical (OEO) conversion, eliminating a major source of latency and power consumption in modern networks. The global optical switch market reached \$5. 5 billion in 2024 and is projected to hit \$12. Access any one of four separate fiber optic networks from one computer.
