

Function of Electrical Wiring Bypass Busbar

Overview

Normally this configuration is used to allow connection of two separately fed buss systems together so that when loss of power to either occurs, the tie breaker closes so that all critical power to the process is not lost. Electrical busbar systems (sometimes simply referred to as busbar systems) are a modular approach to electrical wiring, where instead of a standard cable wiring to every single electrical device, the electrical devices are mounted onto an adapter which is directly fitted to a current carrying. An electric busbar (also written as bus bar) is a metallic bar, strip, tube, or rod that conducts current from one place to another in a safe manner with minimal energy losses. Double. Core idea: A busbar is a conductive bar or assembly that creates a common current distribution point inside electrical equipment.
