

Galvanized Cable Tray Elbow Specifications and Prices

AI Overview

Galvanized cable tray elbows are available in various sizes and angles, typically made from hot-dip galvanized steel for corrosion resistance, with prices varying by size, type, and manufacturer.

Specifications

Material and Coating: Most elbows are made from steel and undergo hot-dip galvanizing to provide a thick, uniform zinc coating, ensuring excellent corrosion resistance in industrial and commercial environments. Other options include bare galvanized steel or epoxy/powder-coated finishes for additional protection.

Types and Angles: Common elbow types include 90° horizontal elbows, 45° elbows, and vertical inside/outside risers. Elbows are designed with smooth curves and precise angles to facilitate seamless cable routing and reduce the risk of cable damage.

Sizes and Dimensions: Cable tray widths typically range from 25mm to 200mm, with heights from 50mm to 120mm, depending on the system and load requirements. Non-standard sizes can often be custom-ordered to match specific cable tray systems.

Compatibility: Designed to fit perforated, ladder, solid, or wire mesh cable trays, ensuring flexibility in installation.

Standardized: Designed to meet BS EN 61537 and other international quality standards for cable management systems.

Pricing

Prices vary depending on size, material, and manufacturer. Hot-dip galvanized elbows are generally more expensive than bare galvanized due to the additional corrosion protection.

Chinese manufacturers, such as Jiangsu Holdee Electric Co., Ltd, offer competitive pricing and can provide both standard and custom specifications, often with advantages in bulk orders and fast delivery.

For precise pricing, it is recommended to request a quotation from suppliers based on the required dimensions, type, and quantity.

Applications

Suitable for industrial projects, commercial buildings, and other cable management systems. Ideal for environment...
