

Home router fiber optic red light

AI Overview

A red or blinking LOS light on a fiber optic router indicates a loss of signal, meaning your router cannot communicate with your Internet Service Provider (ISP). What the Red Light Means The LOS (Loss of Signal) or red light on your router signals that the device has lost its connection to the ISP. This can happen even if the router itself is functioning correctly; the problem is usually with the signal coming from the fiber optic line or the connection to your home network. A steady red light often indicates a persistent issue, while a blinking red light may suggest intermittent signal loss or ongoing attempts to reconnect. Common Causes Fiber Optic Cable Damage: Cuts, bends, or kinks in the fiber optic cable can disrupt the signal. Service Outage: ISP maintenance, technical issues, or local outages can temporarily cut your connection. Loose or Improper Connections: Cables not fully seated in the WAN/ONT port or damaged connectors can trigger the red light. Router or ONT Malfunction: Hardware issues or firmware problems may prevent proper communication. Power Fluctuations: Inconsistent power supply can affect router performance and cause signal loss. Troubleshooting Steps Check for ISP Outages: Visit your ISP's website or social media pages to see if there is a known service disruption. Inspect Fiber Optic Cables: Look for visible damage and ensure all cables are securely connected to the WAN/ONT port. Power Cycle the Router: Turn off the router, wait 30–60 seconds, and turn it back on. If you have a separate ONT, power it on first, then the router. Update Firmware: Use your router's app or web interface to check for pending firmware updates, which can fix bugs and improve connectivity. Test with a Different Router or ONT: If possible, swap devices to determine if the hardware is faulty. Contact Your ISP: If the red light persists after these steps, the issue may be outside your home, requiring professional repair or replacement of the fiber line. Additional Tips Avoid bending or stretching fiber optic cables, as even minor damage can cause signal loss. Keep the router in a...
