AI Overview

The Mercedes-Benz GLC300 comes equipped with 6 USB-C ports and two 12V sockets for charging and connectivity. The GLC300 features six USB-C ports distributed throughout the cabin, allowing both front and rear passengers to charge devices and connect to the MBUX multimedia system for music and app integration (Mercedes-Benz official specifications). In addition, there are two 12V sockets for supplementary power needs. Front USB ports: Typically, there are two USB-C ports in the front console, often located inside the center console compartment, which support both charging and data transfer for devices like smartphones and USB drives. Rear USB ports: The rear passengers have access to two USB-C ports, usually integrated into the rear console or armrest area, ensuring convenient charging and connectivity for backseat occupants. Additional ports: Some models may include extra USB-C ports in the armrest box or near the rear air conditioning vents, bringing the total to six ports, all supporting quick charging and multimedia integration. These ports are designed not only for charging but also for connecting devices to the car's infotainment system, enabling features like music playback, navigation apps, and smartphone integration. This setup ensures that all passengers can maintain connectivity and power their devices efficiently during travel.
