

How much does a plastic optical distribution box cost

AI Overview

Plastic optical distribution boxes typically cost between \$10 and \$100 depending on port capacity, material, and features. Plastic optical distribution boxes (ODB) are used to terminate, splice, and distribute fiber optic cables in FTTH and FTTx networks. The price of these boxes depends on several factors:

1. Port Capacity: Boxes range from 2 ports up to 48 ports or more. Smaller boxes (2-8 ports) are generally cheaper, while larger boxes with higher fiber capacity cost more.
2. Material and Durability: Most plastic ODBs are made from ABS, PC+ABS, or similar plastics. Higher-quality materials with better impact resistance, UV protection, and IP-rated sealing (e.g., IP65) for outdoor use increase the cost.
3. Indoor vs Outdoor Use: Indoor boxes are usually less expensive, while outdoor-rated boxes with waterproof, dustproof, and anti-aging features are more costly due to enhanced protection.
4. Additional Features: Locking mechanisms, modular trays, and adapter compatibility (SC/LC/PLC) can also affect pricing. Factory-direct or wholesale purchases may reduce unit cost.

Typical Price Range:

- Small indoor boxes (2-8 ports): \$10-\$25 per unit
- Medium boxes (12-24 ports): \$25-\$60 per unit
- Large outdoor boxes (24-48 ports, IP65 rated): \$60-\$100+ per unit

For precise pricing, contacting suppliers like Unitek Fiber or Arnold Cable for a factory quote is recommended, as prices can vary based on quantity, shipping, and customization.
