

How much does an 8GB Huijue optical module cost

AI Overview

An 8GB Huijue optical module typically costs between \$50 and \$150, depending on vendor, compatibility, and specifications. Price Overview 8G Fibre Channel (FC) SFP+ modules, such as those offered by Huijue, are available from both OEM and third-party suppliers. OEM-branded modules tend to be more expensive, often reaching the higher end of the range (\$100–\$150), while compatible third-party modules can be significantly cheaper, sometimes offering savings of up to 50–80% compared to OEM prices. Factors Affecting Price Module Type and Reach: Short-range (SR) modules are generally less expensive than long-range (LR) or extended-range (ER) modules. Vendor and Warranty: Modules from well-known brands or with extended warranties may cost more. Third-party suppliers often provide cost-effective alternatives with comparable performance. Volume Purchases: Buying in bulk can reduce the per-unit cost, especially from third-party distributors. Market Context For 8G FC SFP+ modules, typical street prices for compatible modules are around \$50–\$100, while OEM or specialized modules may reach \$120–\$150. Suppliers like Optcore offer 8G SFP+ modules compatible with major switch brands, often with factory testing and guaranteed compatibility, which can influence pricing. Recommendation If cost efficiency is a priority, purchasing third-party compatible 8GB Huijue modules is a practical option, especially for large-scale deployments. Ensure the modules are tested for compatibility with your existing switches to avoid operational issues. In summary, expect to pay \$50–\$150 per 8GB Huijue optical module, with the exact price depending on module type, vendor, and purchase volume.
