

Huijue distribution boxes in parallel

AI Overview

Huijue energy storage cabinets support parallel connection, enabling flexible capacity expansion, improved reliability, and optimized energy management.

Parallel Configuration Overview Huijue distribution boxes, particularly the HJ-SG-P series, are designed to support multi-machine parallel connections, allowing multiple cabinets to operate together as a single system. This modular approach enables flexible expansion of energy storage capacity from 60 kWh up to 300 kWh per cabinet, and multiple cabinets can be combined to meet higher power or energy requirements.

Key Considerations for Parallel Operation

- State of Charge (SOC) Alignment:** Proper SOC synchronization across parallel cabinets is critical. Misalignment can reduce system efficiency by up to 22% and may even lead to thermal issues if not managed. Advanced battery management systems (BMS) in Huijue cabinets actively balance SOC to maintain safe and efficient operation.
- Voltage and Current Matching:** Parallel cabinets must maintain consistent voltage levels to prevent overcurrent or uneven load distribution. Huijue systems integrate active and passive balancing functions to harmonize voltage across modules.
- Safety and Monitoring:** Each cabinet includes temperature control, fire protection, and early warning systems, ensuring safe operation even in parallel configurations. Intelligent monitoring platforms allow real-time tracking of each cabinet's performance, enabling predictive maintenance and fault detection.
- Flexible Integration:** Huijue cabinets can interface with solar, wind, and thermal power systems, supporting both grid-connected and off-grid modes. Parallel operation allows for peak shaving, frequency regulation, and auxiliary grid support, enhancing overall system efficiency.
- Scalability and Maintenance:** The modular design simplifies installation, operation, and maintenance. Cabinets can be added or replaced without disrupting the entire system, making parallel setups highly scalable for industrial, telecom, or remote applications.
