

Immersion Liquid Cooling for Temperature-Controlled Server Racks in Intelligent Computing Centers

Overview

Immersion cooling absorbs 100% of rack heat — but room cooling remains essential for air quality and humidity management. Data center operators are evaluating liquid cooling technologies to increase energy efficiency as processing-intensive computing applications grow. According to the Dell'Oro Group, the liquid cooling market revenue approach \$2B by 2027 with a 60% CAGR for the years 2020 to 2027, as organizations. LiquidCool Solutions is the only company combining Total Liquid Immersion with Directed Flow (direct-to-chip) in a standard 19" rack. Our products are easy to install and suited for. Advanced AI chips are generating more heat in data centers, necessitating improved cooling solutions. Immersion cooling is a liquid-based thermal management technology in which complete servers are fully submerged in a dielectric, electrically non-conductive fluid. It is a core architectural decision.
