

National Standard Number for Relay Protection

Overview

The widely used United States standard ANSI/IEEE C37. 2 'Electrical Power System Device Function Numbers, Acronyms, and Contact Designations' deals with protective device function numbering and acronyms. Even in those parts of the world where IEC standards are predominate, the use of ANSI numbering. There are two methods for indicating protection relay functions in common use. These types of devices protect electrical systems and components from damage when an unwanted event occurs, such as an electrical. In electric power systems and industrial automation, ANSI Device Numbers can be used to identify equipment and devices in a system such as relays, circuit breakers, or instruments.
