

New type of cable tray in Uzbekistan

AI Overview

Uzbekistan now offers advanced cable tray systems including perforated, ladder, C/U-type, and raceway solutions made from galvanized steel, stainless steel, and fiberglass for industrial and commercial applications.

Overview of Cable Tray Types

Perforated Cable Trays: These trays feature holes along the base and sides to enhance airflow, prevent overheating, and allow easy cable fastening with ties. They are ideal for low-current systems and power distribution lines, ensuring optimal cable performance and longevity.

Ladder Cable Trays: Designed for heavy-duty applications, ladder trays support large cross-section power lines in industrial facilities and mines. Their robust structure with stiffening ribs and high load capacity makes them suitable for high-weight installations.

C and U-Type Trays: These trays provide a compact and versatile solution for routing cables in tight spaces. They are often used in commercial buildings and infrastructure projects where space optimization is critical.

Raceways: A modular and innovative system, raceways allow cables to be routed under floors or along walls in a sealed, tamper-proof manner. They are widely used in communication rooms and computer installations for neat and secure cable management.

Materials and Durability

Cable trays in Uzbekistan are manufactured using galvanized steel, stainless steel, aluminum, and fiberglass, offering corrosion resistance and long-term durability even in high humidity or temperature fluctuations. Hot-dip galvanizing and Sendzimir galvanization are common methods to protect against rust, while powder coating in RAL colors is available for aesthetic and indoor applications.

Suppliers and Manufacturers

Brilltech Engineers Pvt. Ltd.: Offers a wide range of cable trays including ladder, perforated, and raceways, with customization options for size, material, and length. They provide installation support and system design expertise.
