

Nordic Corrugated Conduit Fixing and Installation Solution

AI Overview

Nordic corrugated conduit systems can be securely installed using specialized clips, holders, and transit solutions that ensure vibration resistance, fire protection, and norm-compliant cable routing.

Corrugated Conduit Clips and Holders For professional installations, corrugated conduit clips (also called flexible conduit holders or saddle clips) are widely used to secure flexible conduits in walls, ceilings, floors, or vehicle interiors. These clips are designed to:

- Snap the corrugated conduit into place and fix it with screws or plugs for a stable hold
- Support common conduit diameters, such as 22 mm and 28 mm, with a tight grip without additional tools
- Allow side-by-side linking for multiple parallel runs
- Provide vibration-resistant mounting, reducing abrasion and protecting internal cables
- Be suitable for indoor and sheltered outdoor use, with temperature resistance from -20 °C to +80 °C
- Offer a cleaner, professional finish compared to standard straps or saddles

These clips are ideal for electrical contractors, industrial machinery, vehicle conversions, and renovation projects, ensuring neat cable routing and compliance with IEC or national standards.

Corrugated Conduit Transit Systems For applications requiring conduits to pass through walls, roofs, or vehicle panels, corrugated conduit transit systems provide a safe and efficient solution. Key features include:

- Fire protection-certified inserts made of silicone, compliant with EN 45545-2, hazard level HL3
- IP68-rated protection for dust and water ingress
- Pre-assembled conduits can be installed even if they are longer than the transit system
- Modular and flexible design, compatible with other sealing components for EMC protection or multiple cable sealing
- Easy “on block assembly” installation ensuring tightness and space-saving routing

These systems are particularly useful in rail vehicles, industrial machinery, and other environments wh...
