

# Standard secondary distribution box dimensions and price

## AI Overview

The price of secondary distribution boxes typically ranges from \$30 to \$500 or more, depending on size, capacity, and features.

**Price Ranges by Size and Capacity**

- Small residential boxes (4–8 ways):** Usually cost between \$30 and \$100, suitable for single-phase circuits in homes or small offices.
- Medium boxes (12–16 ways):** Typically priced around \$100 to \$250, often used in larger residential buildings or small commercial setups.
- Large boxes (20–24 ways or more):** Can range from \$250 to \$500+, designed for industrial or commercial applications with higher amperage and multiple circuits.

**Factors Affecting Price**

- Material and Build Quality:** Fire-resistant ABS or metal enclosures cost more than basic plastic units.
- Number of Circuits:** More ways (circuits) increase the price due to larger busbars and additional components.
- Protection Features:** Boxes with MCBs, RCCBs, surge protection, or smart monitoring systems are more expensive.
- Installation Type:** Weatherproof or outdoor-rated boxes carry a premium compared to indoor units.
- Brand and Certification:** Reputable brands with IEC, CE, or ISO certifications may charge higher prices but offer better reliability.
- Customization:** Tailor-made boxes with specific mounting options, labeling, or integration with building management systems can significantly increase cost.

**Additional Considerations**

- Residential vs Commercial/Industrial:** Industrial-grade boxes are more expensive due to higher durability, amperage capacity, and advanced control features.
- Future Expansion:** Modular systems allow adding circuits later, which may justify a higher initial investment.
- Energy Efficiency:** Units with advanced load management or monitoring may have higher upfront costs but reduce long-term energy expenses.

In summary, secondary distribution box prices vary widely based on size, capacity, and features, with small residential units starting ar...
