

# Suriname Aluminum-Galvanized Cable Tray Specifications and Models

## AI Overview

Aluminum-galvanized cable trays in Suriname typically follow international standards such as NEMA VE1-2002 and TCVN 197-2002, as there is no specific Suriname national standard publicly documented.

**Overview** In Suriname, aluminum-galvanized cable trays are widely used for electrical installations in industrial, commercial, and utility projects. These trays are designed to provide corrosion resistance, mechanical strength, and proper ventilation for electrical cables. They are manufactured using hot-dip galvanized steel or aluminum, ensuring long-term durability in harsh environments.

**Applicable Standards** While Suriname does not have a publicly listed national standard specifically for cable trays, manufacturers and suppliers often adhere to international standards to ensure quality and safety:

- NEMA VE1-2002:** This standard specifies the construction, dimensions, and performance requirements for metal cable tray systems, including ladder, perforated, and solid-bottom types.
- TCVN 197-2002:** A Vietnamese standard referenced in some cable tray catalogs, covering similar specifications for metal cable trays.
- IEC 61537:** The International Electrotechnical Commission standard for cable tray systems, applicable to steel, stainless steel, and aluminum trays, ensuring safety, load capacity, and compatibility.

**Typical Specifications** Aluminum-galvanized cable trays in Suriname are generally available in the following dimensions and types:

- Lengths:** 2440 mm, 2500 mm, 3000 mm
- Widths:** 100 mm to 900 mm
- Heights:** 50 mm to 200 mm
- Types:** Ladder, perforated, and solid-bottom trays
- Accessories:** Elbows, tees, reducers, and covers for directional changes and protection

**Practical Guidance** For projects in Suriname, it is recommended to:

- Specify compliance with NEMA VE1-2002 or IEC 61537 when procuring aluminum-galvanized cable trays.
- Confirm material and coating quality to...
