

The function of the light and time control module

Overview

The module processes commands from connected devices or a central controller and adjusts the lighting accordingly, whether that means brightening up a room when someone walks in or dimming during certain times of day to save energy. A lighting control module is the “control center” for your lighting system. It acts as a bridge between your physical lighting fixtures and the smart systems that manage them. Controls enhance any lighting scheme, helping to create a comfortable lit environment as well as optimising energy efficiency. reate success for ABB and all our stakeholders. Together, we address the world's energy challenges, transform industries, reduce emissions, preserve natural resources, promote social progress, and push the frontiers of technology to mak trolled depending on the lighting requirements.
