

Traditional Communication Towers

Overview

There are four main types of telecommunication towers: lattice towers, monopole towers, guyed towers, and stealth towers. Monopole towers are one of the most common types of communication structures. They consist of a single, tall, tapered pole. Because they have a single foundation, monopoles require a. Lattice telecom towers are self-supporting structures fabricated from steel angle sections arranged in a triangular or square configuration. Masts are often named after the. Pile Foundation: In areas with loose or unstable soil, deep foundations known as piles are driven into the ground. These tall steel structures support microwave, VHF/UHF, and cellular transmission while housing the active electronics that form the backbone of modern.
