

Vietnam Solution Special Optical Cable ADSS

Overview

Each Long Span ADSS cable is custom engineered for optimum placement on utility towers and to operate under full weather load, ensuring safe reliable lifetime performance. For installation on high-voltage lines up to 275 KV, an optional track-resistant jacket prevents dry-band. These cables are constructed with FRP Central Strength Member, two-layer tubes with Jelly Compound for double water blocking, Aramid yarn strength member for better tensile strength and rodent protection. As demand for faster and more reliable connectivity grows, various types of fiber optic cables have been deployed across. All dielectric self-supporting (ADSS) cables are designed for aerial installation. The loose tube design provides stable performance over temperature range and is compatible with any telecommunication grade optical fiber. Up to 144 fibers following ITU-T G. 657. High strength with. Water-blocking construction Moisture-proof and prevents water penetration Special filling gel in loose tubes Reduce or eliminate reflection losses and prevent water penetration All dielectric construction design Eliminates electromagnetic induction effect Strict craft and raw material control enable.
