

What does hz mean in terminal box

Overview

Frequency in electrical systems is measured in hertz (Hz), where 1 hertz means 1 complete cycle per second. So a current that switches direction 60 times per second has a frequency of 60 Hz. The hertz is an SI derived unit whose expression in terms of SI base units is s⁻¹, meaning that one hertz is the reciprocal of one second. It is named after Heinrich Rudolf Hertz (1857-1894), the first. What does TAF stand for?
