

Where is the broadband aggregation setting on the switch

Overview

Click on the switch and go to switch Ports > enable Profile Overrides > Aggregating to select the ports requiring LAG configuration, set the LAG ID, and select Static LAG. Then click Apply to save the settings. These technologies include ISDN, DSL, cable, Ethernet, and wireless devices that are connected to corporate virtual private networks (VPNs), third-party applications, and the Internet. Subscriber. Before you begin to perform the tasks required to accomplish broadband access aggregation, there are several preparatory tasks that you can perform at your option to enable you to complete the aggregation task with more efficiency. This module presents three of those preparation tasks: configuring. Link Aggregation, also known as LAG, combines multiple physical network links into a single logical link. In manual mode, you must manually create an Eth-Trunk and add member interfaces to the Eth-Trunk. Key benefits of link aggregation: Higher.
